

Please investigate the business process model in BPMN. What modeling errors can you identify that would cause the model to behave *unsound*? Mark each modeling error (as nodes, flows, subgraphs, etc.) with a circle. If you cannot identify any modeling errors (i.e., the model is error-free in your opinion), use the option “This process model is sound.”. If you cannot solve an exercise, please use the option “No answer”.

☐ This process model is sound.

☐ No answer
